How can I set copy button on the events list in control panel?

<u>Instructions</u>

There are four ways to set up: **Start button, Scan to Web button, Scan to E-mail button**, and **PhotoPrint button**. All the events are designed for fitting the operation of the scanner. It cannot be added anymore.

There is no copy button to be selected directly. However, you can set Copy button as default of start button at the left side bottom of Smart Panel main interface. Then check Smart Panel of start button from the drop-down list of Start Button in an event.

Therefore, when you press start button on the scanner, Copy utility will be launched.
